

CLIMATE CHANGE & TERRORISM

A CALL TO ACTION

The possible conditions through which climate change and terrorism interact require greater examination as climate change increasingly shapes contributing factors to vulnerability, fragility, and insecurity.

CLIMATE-SECURITY-TERRORISM CONCEPT MAP

KEY FINDING

When regions are exposed to increasing climate insecurity and are highly dependent on the environment, the positive correlational relationship between climate change and violence strengthens. This may affect terrorism as well.

While climate change may not be a direct "root cause" of terrorism it is recognized as a predominant destabilizing force that can foster an enabling environment for violent extremist organizations (VEOs).
